ABOUT ME

Information Security Student with hands-on experience in web development, software development, and cybersecurity projects. Skilled in advanced tech stack with experience developing practical web-based solutions and working with security-focused technologies. Strong problem-solving and analytical skills, with a passion for cybersecurity, secure application development, and emerging technologies. Seeking opportunities to apply technical and cybersecurity skills while contributing to innovative projects in the technology industry.

EDUCATION

UNIVERSITI TUN HUSSEIN ONN MALAYSIA (UTHM)

Bachelor of Computer Science with Honours, Minor in Information Security

Johor, Malaysia

Oct 2023-Present

- Current GPA: 3.69 / 4.00
- Final Year Project Title: Silver Gilt Ordering Management System with Email OTP Verification

PROJECTS

Silver Gilt Ordering Management System with Email OTP Verification

Feb 2026-Present

- For my final year project, I designed a secure web-based ordering system for Silver Gilt, a gold-plated accessories shop in Sana'a, Yemen, that replaces its manual paper, Excel and WhatsApp workflow with online ordering for customers, admins and staff, secured by email OTP, Bcrypt hashing, CAPTCHA and session time-outs.

Secure University Voting and Survey System

Mar 2026

- A web-based university voting and survey platform where every ballot is encrypted (AES-256-GCM), hashed (SHA-256) and signed (RSA-2048). The database keeps votes separate from voter identities, which keeps ballots anonymous and blocks double voting. Logins require a password plus an authenticator-app code. It supports committee elections, role assignment, rule votes and anonymous surveys, and admins can audit each ballot's integrity without seeing who cast it.

Aegis Vault – Secure File Manager

Nov 2025

- A Java desktop app that encrypts local files with AES-256, using a key derived from the user's password via PBKDF2, so no key is ever stored. It deletes the plain-text originals, protects logins with salted hashing and a brute-force lockout, and logs all activity. It was threat-modeled with STRIDE and security-tested with SonarQube.

SKILLS

Technical Skills

- Programming Languages: JavaScript, TypeScript, HTML, CSS, PHP, Python.
- Security & Cryptography: Encryption, Signatures & hashing, Authentication, Attack protection, Practices & standards

Languages:

- Arabic (Native).
- English (Professional working proficiency).

AWARDS AND HONORS

- [CCNAv7 : Introduction to Networks](#) certificate from CISCO.
- Head of Social & Cultural Affairs Officer of the Yemeni Students' Union (UTHM)
